Why This Book?

Hello, dear reader.

First, thank you for purchasing this book. We hope it serves you well in your journey of learning Swedish.

Here's a fact for you: In any given language, you only use about 1000 different words a day in day-to-day spoken language. They account for about 95% of all spoken language. When it comes to reading; the 2000 most used words account for about 85% of all that is written.

Keeping this in mind, the value of a frequency dictionary is immense. At least, that is if you want to speak a language fast. Study the most frequent words, build your vocabulary and progress naturally. Sounds logical, right?

But how many words do you need to know for fluency?

While it's important to note that it is impossible to pin down these numbers and statistics with 100% accuracy, these are a global average of multiple sources.

According to research, this is the amount of vocabulary needed for varying levels of fluency.

1. 250 words: the essential core of a language. Without these words, you cannot construct any sentence.
2. 750 words: those that are used every single day by every person who speaks the language.
3. 2500 words: those that should enable you to express everything you could possibly want to say, although some creativity might be required.
4. 5000 words: the active vocabulary of native speakers without higher education. You will understand 95% of all written texts.
5. 10,000 words: the active vocabulary of native speakers with higher education.
6. 20,000 words: what you need to recognize passively to read, understand, and enjoy a work of literature such as a novel by a notable author.

Our frequency dictionary of Swedish includes the 10.000 most common Swedish words, based on analysis of around 10 gigabytes of Swedish subtitles.

Visualize a book with almost 7 million pages, or 30.000 books of 200 pages each, to get an idea of the amount words that have been analyzed for this book. A large base text is vital to developing an accurate frequency list.

However, a frequency list is never “The Definite Frequency List.”

Depending on what source material was analyzed, you may get different lists. A corpus on spoken word differs from source texts based on a written language.

That is why we chose subtitles as our source, because, according to science, they cover the best of both worlds: both spoken and written Swedish.

Some entries you might find odd, in their respective frequency rankings. We were surprised a couple of times ourselves. But the data does not lie. Keep in mind that this book is compiled from a large amount of text, and may include words you wouldn't use yourself.

The raw data included over 1 million entries. The raw data has been lemmatized; words are given in their root form.

We tried our best to keep out proper nouns, such as “Jack, Ryan, Alice as well as “Rome, Washington” or “the Louvre, the Capitol”.

If you encounter a word, you think you won't need in your vocabulary, just skip it. The frequency list includes 100 extra words to compensate for any irregularities you might encounter.

The big secret to learning language is this: build your vocabulary, learn basic grammar and go out there and speak. Make mistakes, have a laugh and learn from them.

We hope you to enjoy this frequency dictionary, and that it helps you in your quest of speaking Swedish.

WORD ORDER

The most common translations are given first. This resets by every new respective part of speech. Different parts of speech are divided by “.”.

Translations

We made the decision to give the most common translation(s) of a word, and respectively the most common part(s) of speech. Previously, we gave all the translations. Reader feedback showed that learners would prefer a single, or a maximum of two translation per part of speech. It does however, not mean that this is the only possible translations or the only part of speech the word can be used for.
